
(a) Decoupled CSAR-Net
Feature layer: CBAM
label-agnostic
Loss layer: LDAM
label-dependent
over-corrects
same in train & inference
vanishes at inference
CBAM (feature): +3.1pp (best)
CBAM+LDAM: −0.8pp
(b) Coupled CS-CBAM (collapses)
Attention + injected
$\lambda \log(N/n_c)$
train: label known
shortcut "big attn = tail"
inference: label unknown
shortcut fails
macro G-mean → 0
collapse
